### **cGMP CMO Florida Biologix<sup>®</sup> Announces Manufacturing Agreement**

Alachua, FL: Florida Biologix<sup>®</sup>, a full-service biopharmaceutical development and contract manufacturing organization, announced that it has entered into a cGMP manufacturing agreement with the National Taiwan University Hospital. Under the agreement, Florida Biologix will produce a Phase I clinical batch of their novel therapy for a rare genetic disease – AADC deficiency.

“We are excited to support another major clinical project just into our second year of operation,” said Dr. Richard Snyder, Director of Florida Biologix. “Our specialized experience in the manufacture, testing and filling of biopharmaceuticals combined with our unique business model makes us an ideal partner to work with the National Taiwan University Hospital. As with all of our client companies, we will work closely with their team to help them achieve their manufacturing objectives.”

“We are very excited to have Florida Biologix produce our investigational therapy for patients in Taiwan” said Dr. Paul Wuh-Liang Hwu. “They have a track record of expertise in biopharmaceutical manufacturing and testing, including capabilities to make material for both pre-clinical and clinical trials.”

**About Florida Biologix:** Florida Biologix<sup>®</sup> is a Phase I/II contract development, manufacturing & testing organization that offers a wide range of biopharmaceutical services to industry and research institutions. Their goal is to work closely with clients to develop, produce, test and/or fill cGMP compliant early phase biopharmaceutical clinical trial material *on time* and at a *reasonable price*. Florida Biologix operates a 23,000 square foot, state-of-the-art, validated, multi-product manufacturing and testing facility and 5,000 square feet of fully-equipped, process development laboratories. They can provide a services package starting from process design and development through full-scale cGMP compliant manufacturing, purification and aseptic filling or can develop customized programs based on client specific needs. Their excellent in-house quality department provides a full range of analytical services, facility and systems monitoring and regulatory support including CMC and DMF preparation.
